

FREE LEAD SCREENING EVENT

Casa Freehold

April 19th

4 Jackson St, Freehold

1:00- 3:00pm

Children ages 1-6 and
pregnant women

Lead can be found in dust, air, water, soil, and in some products used in and around our homes. Most often, children get lead poisoning from breathing in or swallowing dust from old lead paint. Lead poisoning is 100% Preventable.

Do you know
lead can be
pass to your
developing
baby?

care provider?

- Yes
- No

Do you need help obtaining health
insurance?

- Yes
- No

It is important to have your child tested between 12 and 36 months. A child can have lead poisoning and not look or act sick. Lead testing is not part of a routine pediatric check-up. Parents should ask their health care provider to test their child's blood for lead.

Lead is a metal that can harm a young child's growth, behavior, and ability to learn.
